Mr. Prashant K. Gupta
Honeywell, Inc.
115 Tabor Road
Morris Plains, NJ 07950

Dear Mr. Gupta:

The purpose of this letter is to approve the "Technical Memorandum - Carbon Dioxide Sparge Well Network Decommissioning Report, dated September 1, 2021 (hereinafter referred to as the Decommissioning Report). The Decommissioning Report documents the abandonment and sealing of 263 sparge wells, 35 piezometers, and 7 proof-of-concept monitoring wells associated with the CBP treatments, and 12 piezometers associated with the historical phytoremediation pilot study for OU2. It is noted that three of the 500-series CBP extraction performance monitoring well clusters (MW-510 A/B, MW-511 A/B and MW-518 A/B) were inadvertently plugged during the decommissioning event. Two sparge wells (SW-77 and SW-197) were converted to monitoring wells, to replace the abandoned monitoring wells.

If you have questions regarding the preceding, please contact me at (404) 272-5799 or pope.robert@epa.gov.

Sincerely,

ROBERT POPE Digitally signed by ROBERT POPE
